

ZAMA FHEVM · CONFIDENTIAL FINANCE

Private prize savings, built for verification.

Principal stays withdrawable while encrypted balances and ticket weights stay confidential.

[Open the Veylott live demo](#)

UNAUDITED RESEARCH · NOT PRODUCTION

THE PROBLEM

Public ledgers expose private financial context

Auditability should not require publishing every saver's position.

01

Balance exposure

Wallet history can reveal a saver's position, deposits, withdrawals, and changing financial behavior.

02

Visible ticket weights

Transparent weights make whale activity easy to track and can disclose each participant's relative odds.

03

Timing reveals intent

Pending deposits and last-minute entries expose behavior around a prize round before it settles.

THE SOLUTION

Public custody. Confidential accounting.

Veylott separates what must be auditable from what should remain private.

PUBLIC · INDEPENDENTLY VERIFIABLE

Custody layer

- Deposited testnet cUSDC
- Contract and custody bindings
- Transaction receipts
- Runtime and policy

ENCRYPTED · WALLET-AUTHORIZED

Privacy layer

- Running balances as euint64
- Weighted draw intervals
- Prize credits
- Local balance reveal

ARCHITECTURE

A verifiable path from wallet to confidential settlement

LIVE PRODUCT

The console is live—and honest about connection state

PRIVATE PRIZE SAVINGS

Save privately

Prize rounds

How it works

Connect wallet

CONFIDENTIAL SAVINGS CONSOLE

Your position stays private.

Deposit confidential cUSDC, enter verifiable prize rounds, and withdraw without publishing amounts, balances, or ticket weight.

Encrypted accounting

Wallet-bound access

Verifiable exits

CONFIRMED ROUNDS

1

Recorded on Sepolia

LIVE

PRIVATE OPERATIONS

Manage your savings

PRIVATE POSITION

ACL PROTECTED

Only you can reveal this balance

The ciphertext stays on-chain. Decryption happens locally after wallet authorization.

STEP 01

ENCRIPTED END-TO-END

Fund your private position

The amount transfers as cUSDC and remains encrypted in calldata.

STEP 02

ONE TRANSACTION

Withdraw confidentially

The requested amount and transferred cUSDC remain encrypted throughout settlement.

Balances reveal only after wallet authorization. Deposits and settlement remain independently verifiable on-chain.

PRODUCTION CAPTURE

Clear wallet state

A disconnected user sees only Connect wallet. An address appears only after the provider returns the selected account.

Runtime assurance

Chain, bytecode, and custody bindings are checked before protocol writes.

Captured from the canonical Veylott deployment · 5 Sep 2026

Four explicit steps. No hidden signing.

SECURITY CONTROLS

Solvency and settlement invariants are enforced in code

01

Asset-bound credit

Encrypted deposit credit is derived from the token-returned custody amount.

02

Reserved prizes

Each draw consumes verified sponsor funds so assets cannot fund repeated awards.

03

Complete liabilities

Winner credit enters both the encrypted position and aggregate at finalization.

04

Private settlement

KMS evidence reveals only a request-bound readiness bit; aggregate amounts stay encrypted.

05

Timeout recovery

Anyone can release a stale draw lock after the 24-hour cancellation delay.

VERIFIED EVIDENCE

A real three-wallet round on the active pool

Each transaction links directly to a confirmed Sepolia receipt; no result is simulated.

01

Encrypted deposit

[0x5fcdac...c676](#)

3 wallets activated
